Mark Walker Director of Public Affairs
Northwest Power and Conservation Council

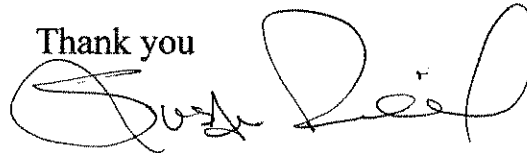

Concerning: Draft Recommendations

Dear Mr. Walker,

I write to ask that renewable resources be treated with the respect given to energy efficiencies in the Draft recommendations. BPA should be encouraged and charged with developing renewable resources such as the Stateline project. Stateline is an example of what should and can happen, benefiting communities in many ways from the environmental to family wage jobs.

Renewable Energy is too important to be short changed in the draft, please take another look at what can and should happen in our energy future.

Thank you

Susan Reid
