Subject: Adopt Public Interest Proposal

To the BPA

Please adopt the Public Interest Proposal. Our immediate future is so clearly threatened by the continual production of excess carbon dioxide that it is incumbent on us to take every possible opportunity to ease the transition from fossil fuels to renewable, clean, safe alternative forms of energy. Conservation and inauguration of new wind, and solar energy facilities will give our children a fair chance at the American dream. The predictions that atmospheric scientists have been making for the past 15 years are now coming true: the raised temperatures, deadly heat waves, devastating storms, floods, droughts, fires, insect infestations and disease vectors moving. These are not simply acts of God, mankind is enormously increasing the likelihood of their occurrence by burning fossil fuels, even though we have viable and economically reasonable alternative technology at our disposal. Coming generations will wonder why we ignored the warnings, when a reasonable investment would make the technological transition to ensure sustainability and protect our way of life.
